This document describes vRealize Application Services 7.3 Hotfix for vRealize Automation Center.

Contact VMware Customer Support if you have any questions or concerns.

This hotfix addresses following issue:

Xaas items based on dynamic type gets description renamed during day 2 operations

Prerequisites:-

• Download vCAC_73_HF_2126011.zip and extract its contents.

• Take the Backup of "advanced-designer-service" folder from /usr/lib/vcac/server/webapps/advanced-designer-service

Procedure:-

• Take a snapshot of the vCloud Automation Center appliance and IAAS components.

• Stop vcac-server service.

• Copy the Downloaded war to (/usr/lib/vcac/server/webapps/) using scp command.

• Extract the war file.

• Grant (almost) all rights to the extracted file.

• Delete the war file.

• Start the vcac-server service.

• Make sure that services are registered properly, and no errors are thrown in catalina.out file.

Rollback Steps: -

Rollback in case of any errors after adding the advanced-designer-service.war

• Stop services.

• Remove the /usr/lib/vcac/server/webapps/advanced-designer-service folder.

• Copy the original directories from your backup directory.

• Grant (almost) all rights to the restored files.

• Start the services.
